

CLAIMS

We claim:

1. An expression vector comprising the following operably linked elements:

a transcription promoter;
a DNA segment which encodes a Zsig9 polypeptide or a peptide or polypeptide which contains an epitope-bearing region of a Zsig9 polypeptide; and
a transcription terminator.

2. An expression vector comprising the following operably linked elements:

(a) a transcription promoter;
(b) a DNA segment encoding a chimeric polypeptide, wherein said chimeric polypeptide consists essentially of a first portion and a second portion joined by a peptide bond, said first portion being comprised of a mammalian polypeptide, said polypeptide being the amino acid sequences of SEQ ID NOS: 2-6, 17, 20 19 and 21 and said second portion being a second polypeptide or protein.

(c) a transcription terminator.

3. An isolated Zsig9 polypeptide selected from the group of amino acid sequences consisting of SEQ ID NOS: 22-6, 17, 20 19 and 21 or a polypeptide which is at least 90% identical to said polypeptides.

4. An isolated peptide or polypeptide having at least 15 amino acid residues comprised of an epitope-bearing portion of a polypeptide of SEQ ID NOS: 2-6, 17, 20 19 and 21.

5. An antibody, antibody fragment or single-chain antibody that specifically binds to a mammalian polypeptide, said polypeptide being defined by the amino acid sequences of

SEQ ID NOs: 2-6, 17, 20 19 and 21 or a polypeptide which is at least 90% identical to said amino acid sequences.

6. An antibody of claim 5 wherein said antibody is either monoclonal or polyclonal.

7. The antibody, antibody fragment or single-chain antibody of claim 6 wherein said antibody, antibody fragment or single-chain antibody is humanized.

8. A method for producing an antibody which binds to a peptide or polypeptide defined by SEQ ID NOs: 2-6, 17, 20 19 and 21 or to a peptide or polypeptide which is at least 90% identical to said peptide or polypeptide comprising bringing into contact a peptide or polypeptide defined by SEQ ID NOs: 2-6, 17, 20 19 and 21 or to a peptide or polypeptide which is at least 90% identical to said peptide or polypeptide with a cell capable of producing antibodies or the cell is brought into contact with a nucleic acid which encodes said peptide or polypeptide, wherein said cell produces antibodies to said peptide or polypeptide; and isolating said antibody.

9. The antibody of claim 8 wherein said antibody is either a polyclonal or monoclonal antibody.

10. The method of claim 8 wherein an animal is inoculated with the peptide or polypeptide or nucleic acid under conditions wherein the animal produces antibodies to said peptide; and isolating said antibodies.

11. The method of claim 10 wherein the antibodies are polyclonal or monoclonal.

12. An anti-idiotypic antibody, anti-idiotypic antibody fragment or anti-idiotypic single-chain antibody which binds to an antibody, an antibody fragment or single-

chain antibody of peptide or polypeptide defined by SEQ ID
NOs: 2-6, 17, 20 19 and 21 or to a peptide or polypeptide
which is at least 90% identical to said peptide or
polypeptide.
